

Summary

In Geometry you will explore three skills for describing spatial constructions--- measure, construct, and analyze. With these skills you will be able to model relationships for problem solving, predict relationships for further insight, and design original works based on your understanding.

Summary

In Algebra 1 you will explore three skills for describing mathematical relationships--graphs, equations, and written descriptions. With these skills you will be able to model relationships for problem solving, predict relationships for further insight, and design original works based on your understanding.
